

TIPS

Central Air Conditioning Units

Proper maintenance can save you money and extend the life of your unit.

Steps you can take to protect you and your home....

- *Make sure CONDENSATION LINES and DRAINS are clear; they can clog up over time causing leaks or overflows.
- *Replace or clean AIR FILTER every 1 - 3 months.
- *CONDENSING UNIT should be free of any debris.
- *DUCT WORK should be properly sealed.
